Cyber Physical Systems. Design, Modeling, and Evaluation

5th International Workshop, CyPhy 2015
Amsterdam, The Netherlands, October 8, 2015
Proceedings
Preface

It is with great pleasure that we present the proceedings of the 5th Workshop on Design, Modeling and Evaluation of Cyber Physical Systems (CyPhy 2015). The workshop was organized as part of ESWeek 2015 in Amsterdam, The Netherlands.

Cyber physical systems combine computing and networking power with physical components. They enable innovation in a wide range of domains including robotics; smart homes, vehicles, and buildings; medical implants; and future-generation sensor networks. CyPhy 2015 brought together researchers and practitioners working on modeling, simulation, and evaluation of CPS, based on a broad interpretation of these areas, to collect and exchange expertise from a diverse set of disciplines.

This year the workshop solicited publications in three categories: research papers, position papers, and tool demonstrations. There were submissions in all categories except for tool demonstrations. The full call for papers can be found on the workshop website (www.cyphy.org).

The review process was conducted as follows. First, the international Program Committee (PC) members expressed interest in reviewing specific papers and also declared conflicts of interest. (There were two papers, involving two PC members. Throughout the process, the EasyChair conference system limited those reviewers who declared a conflict with a given paper from access to that paper, its reviews, and from discussions on it.) After collecting preferences and conflicts, papers were assigned to reviewers. Papers received on average three reviews. After the majority of reviews were submitted, there was a week of online PC meeting. Extensive discussions in the PC meeting were conducted for nine papers and a summary thereof was provided to the authors. Out of all 13 submissions, 10 were selected for publication.

We would like to take this opportunity to acknowledge the excellent efforts of the PC, the external reviewers, and the authors. We thank the Steering Committee of the CyPhy workshop series and in particular its chairperson Professor Walid Taha, for their confidence and their advice. We also wish to thank Professor Tulika Mitra (ESWEEK Workshop Chair), Professor Nikil Dutt (member of ESWEEK Steering Committee), and Professor Rolf Ernst (ESWEEK General Chair) for their effort in facilitating this year’s workshop.

Organization

Program Committee

Jakob Axelsson       Mälardalen University, Sweden
Christian Berger     University of Gothenburg, Sweden
Manuela Bujorianu   University of Leicester, UK
Georgios Fainekos    Arizona State University, USA
Daisuke Ishii       Tokyo Institute of Technology, Japan
Zhiyun Lin          Zhejiang University, China
Wojciech Mostowski  University of Twente, The Netherlands
Mohammad Reza Mousavi Halmstad University, Sweden
Michel Reniers       Eindhoven University of Technology, The Netherlands
Bernhard Rumpe       RWTH Aachen University, Germany
Maytham Safar        Kuwait University, Kuwait
Bernhard Schaetz     TU München, Germany
Christoph Seidl      Technische Universität Dresden, Germany
Martin Steffen       University of Oslo, Norway
Frits Vaandrager    Radboud University Nijmegen, The Netherlands

Additional Reviewers

Bertram, Vincent    Swartjes, Lennart
Gupta, Pragya Kirti Tuncali, Cumhur Erkan
Hermersschmidt, Lars van der Sanden, Bram
## Contents

Resource-Aware Control and Dynamic Scheduling in CPS ............................ 1
  W.P.M.H. Heemels

Current Challenges in the Verification of Hybrid Systems ....................... 7
  Stefan Schupp, Erika Ábrahám, Xin Chen, Ibtissem Ben Makhlouf,
  Goran Frehse, Sriman Sankaranarayanan, and Stefan Kowalewski

Constructive Modelling of Parallelized Environmental Models for
Structured Testing of Automated Driving Systems ............................... 24
  Sebastian Siegl and Martin Russer

Core Research and Innovation Areas in Cyber-Physical Systems of
Systems: Initial Findings of the CPSoS Project ................................. 39
  S. Engell, R. Paulen, M.A. Reniers, C. Sonntag, and H. Thompson

A Parametric Dataflow Model for the Speed and Distance Monitoring in
Novel Train Control Systems ....................................................... 55
  Benjamin Beichler, Thorsten Schulz, Christian Haubelt,
  and Frank Golatowski

A Modelling Framework for Cyber-Physical System Resilience .................. 66
  Manuela L. Bujorianu and Nir Piterman

Recharging Probably Keeps Batteries Alive ....................................... 82
  Holger Hermanns, Jan Krčál, and Gilles Nies

Fault Localization of Energy Consumption Behavior Using Maximum
Satisfiability ................................................................. 98
  Shin Nakajima and Si-Mohamed Lamraoui

Hybrid Secure Data Aggregation in Wireless Sensor Networks .................. 115
  Keyur Parmar and Devesh C. Jinwala

Formally Analyzing Continuous Aspects of Cyber-Physical Systems
Modeled by Homogeneous Linear Differential Equations ....................... 131
  Muhammad Usman Sanwal and Osman Hasan

Author Index .............................................................................. 146
